1 Introduction

Frog ID is a user-friendly front-end platform designed to help label and analyze spectrogram data using Label Studio as its backend. It enables users to identify frog species from audio recordings in a simple and interactive way, without requiring extensive technical setup. While the primary use case is frog species identification across different environments, the platform can also be adapted for other types of spectrogram-based analysis.

For the easiest experience, users can run the application in their browser or follow the provided setup instructions to launch it locally. This guide will walk you through both options so you can begin labeling and reviewing data quickly.

For those interested in more of the technical side, Frog ID consists of a React-based frontend that interfaces with a locally or remotely hosted Label Studio instance. The system relies on Label Studio for task management, annotation storage, and backend processing, while the frontend provides a streamlined interface tailored for spectrogram labeling workflows. The project can be extended to support additional machine learning pipelines, custom labeling schemas, or alternative audio analysis tasks.

The codebase is actively maintained, and the most up-to-date version, including recent features and fixes, can be found on the official GitHub repository: <https://github.com/caileymm/froglabel-studio.git>.

2 Keyboard Commands

This list shows the keyboard shortcuts for code entry, box editing, audio playback, and spectrogram navigation.

- Space: Set code.
- Tab: Select next box.
- Shift + V: Play or pause the audio at the selected box.
- Shift + D: Delete the selected box.
- Esc: Deselect the current box.
- V: Play or pause audio.
- A: Pan left.
- D: Pan right.
- Q: Zoom in.
- E: Zoom out.
- C: Reset the view.
- R: Change playback speed.

3 Getting Started

Run locally (for developers)

1. Open Terminal window 1, run:

```
cd Desktop
git clone https://github.com/caileymm/froglabel-studio.git
pip install label-studio # if already installed then skip this step
echo 'export PATH="$HOME/Library/Python/3.9/bin:$PATH"' >> ~/.zshrc
source ~/.zshrc
label-studio start
```

2. Open Terminal window 2, run:

```
npm run dev
```

3. View localhost links.
4. Navigate to your Personal Access Token on Label Studio.
5. Copy the Access Token.
6. Paste the Access Token and task number into the login page on the local web page.

Run in browser (for non-developers)

1. Navigate to: <https://caileymm.github.io/froglabel-studio/>
